## VIBRATORY SPIRAL ELEVATOR

# MAGNAPOWER

# MAGNAPOWER

## GENTLE VERTICAL MOVEMENT WITH MAXIMUM EFFICIENCY

Spiral Vibratory Elevators provide a compact and efficient method of vertical material handling, using controlled vibration to move products smoothly along a spiral path.

Their engineered design ensures a reliable, consistent flow of materials while reducing product damage. Available in customisable sizes with height and width configurations tailored to your process, they deliver high performance wherever efficiency, reliability, and minimal floor space are essential.

Feature	Benefit
<b>Vertical material handling</b>	Efficiently lifts materials in a compact spiral path
<b>Gentle vibratory movement</b>	Protects delicate products and reduces damage
<b>Customisable design</b>	Diameters, heights, and configurations tailored to your process
<b>High throughput</b>	Handle significant material volumes with controlled flow
<b>Integrated processing</b>	Allows drying or cooling during elevation
<b>Hygienic construction</b>	Stainless-steel options for food and pharmaceutical use
<b>Minimal footprint</b>	Saves valuable floor space compared to traditional conveyors
<b>Low maintenance</b>	Suitable for hygienic or heavy-duty industrial environments
